

AI & Machine Learning for Civil Engineers

From engineering data to prediction, explainability and uncertainty, in eight hands-on sessions.

08

Live sessions

90 min

Per session

04 weeks

Course duration

**Runs 100% on Google Colab**

Nothing to install, works even on a Chromebook

**Built for beginners**

No prior Python or machine learning required

**Live code-along on real data**

Concrete, geotechnical, water and transport datasets

**Notebooks, assignments & solutions**

Plus a certificate and session recordings

INSTRUCTOR**Dr. Abdul Waris**

Research Associate, University of Siegen, Germany

Former Prime Minister's Research Fellow

Ph.D., IIT Hyderabad

Research Excellence Award 2026, IIT Hyderabad

Invited talks at Oregon State University (USA), Norway & Spain

Course outline

Problem → Data → Model → Validate → Interpret → Decide

01 Python for civil engineers**02** From raw data to ML-ready**03** Your first prediction model**04** Trees & ensemble models**05** Classification for decisions**06** Artificial neural networks**07** Explainable AI & engineering judgement**08** Uncertainty & reliability analysis**WHO SHOULD JOIN**

B.Tech & M.Tech students / PhD scholars / Faculty
Practising civil, structural & geotechnical engineers
